

NLIS Alpaca Tags

The alpaca industry in Australia has joined the National Livestock Identification System (NLIS).

The NLIS is part of Australia's food safety and biosecurity system. **It is free for all alpaca owners to use.**

The NLIS traces movements of red meat livestock (such as cattle, sheep, goats, and alpacas) from their property of birth and throughout their lifetime.

NLIS tags for alpacas come in two types, either a button or a loop.

They may be yellow or another colour based on the alpaca's year of birth.

NLIS tags have a microchip inside as well as a printed number. This enables the tag to be read by an electronic reader.

The AAA website has more information on alpacas and the NLIS, with links to videos and handy resources.

Check it out at:
